

ADDING AN OBS NINJA STREAM INTO OBS - THE NDI™ METHOD

Advantages: audio and video are in sync. Only one path for both A and V into OBS.
Note: requires a virtual audio device. Only one instance per system is possible

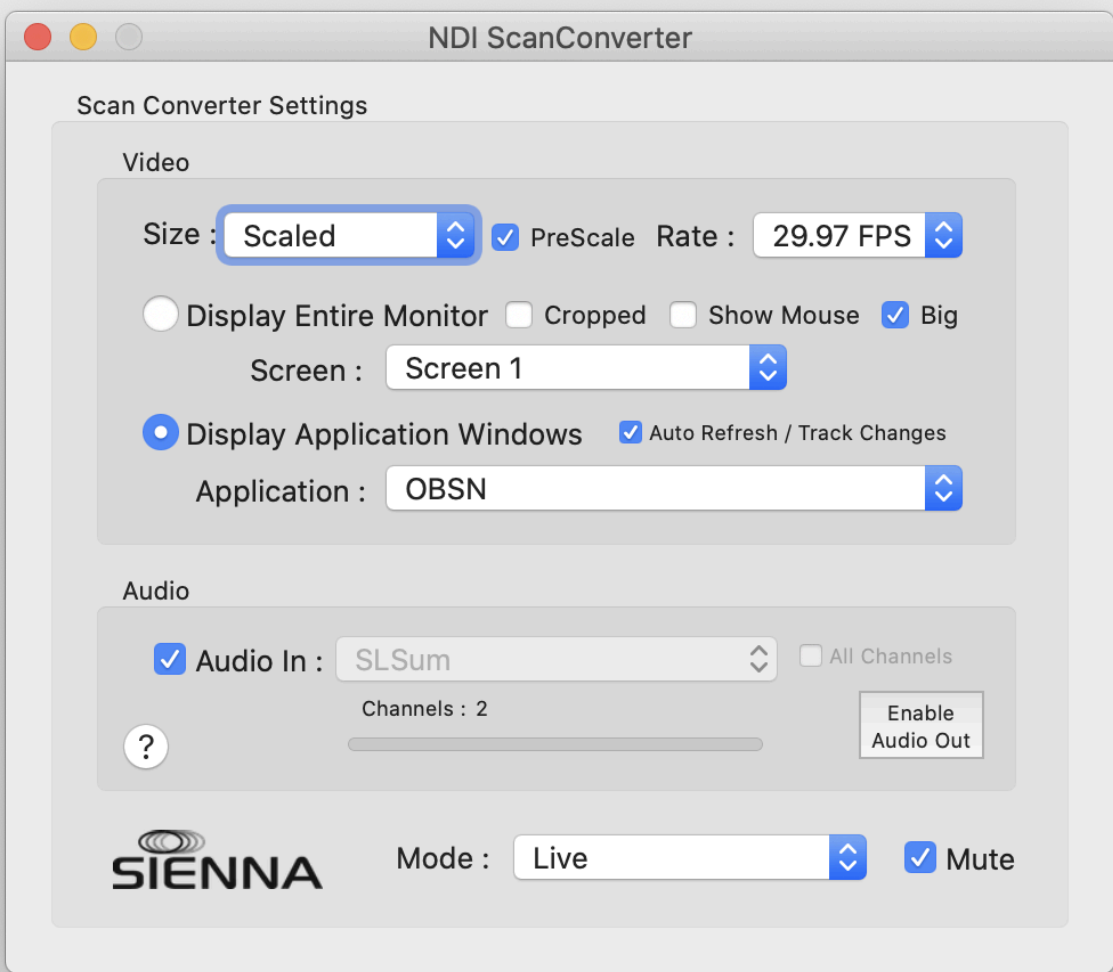

OBS Ninja Electron App

2 VIDEO

3 AUDIO

To couple the audio to the video, send it to a virtual audio device like Loopback, Blackhole, Soundflower, etc. (e.g. select that device as an audio output in the OBS Ninja Electron app)

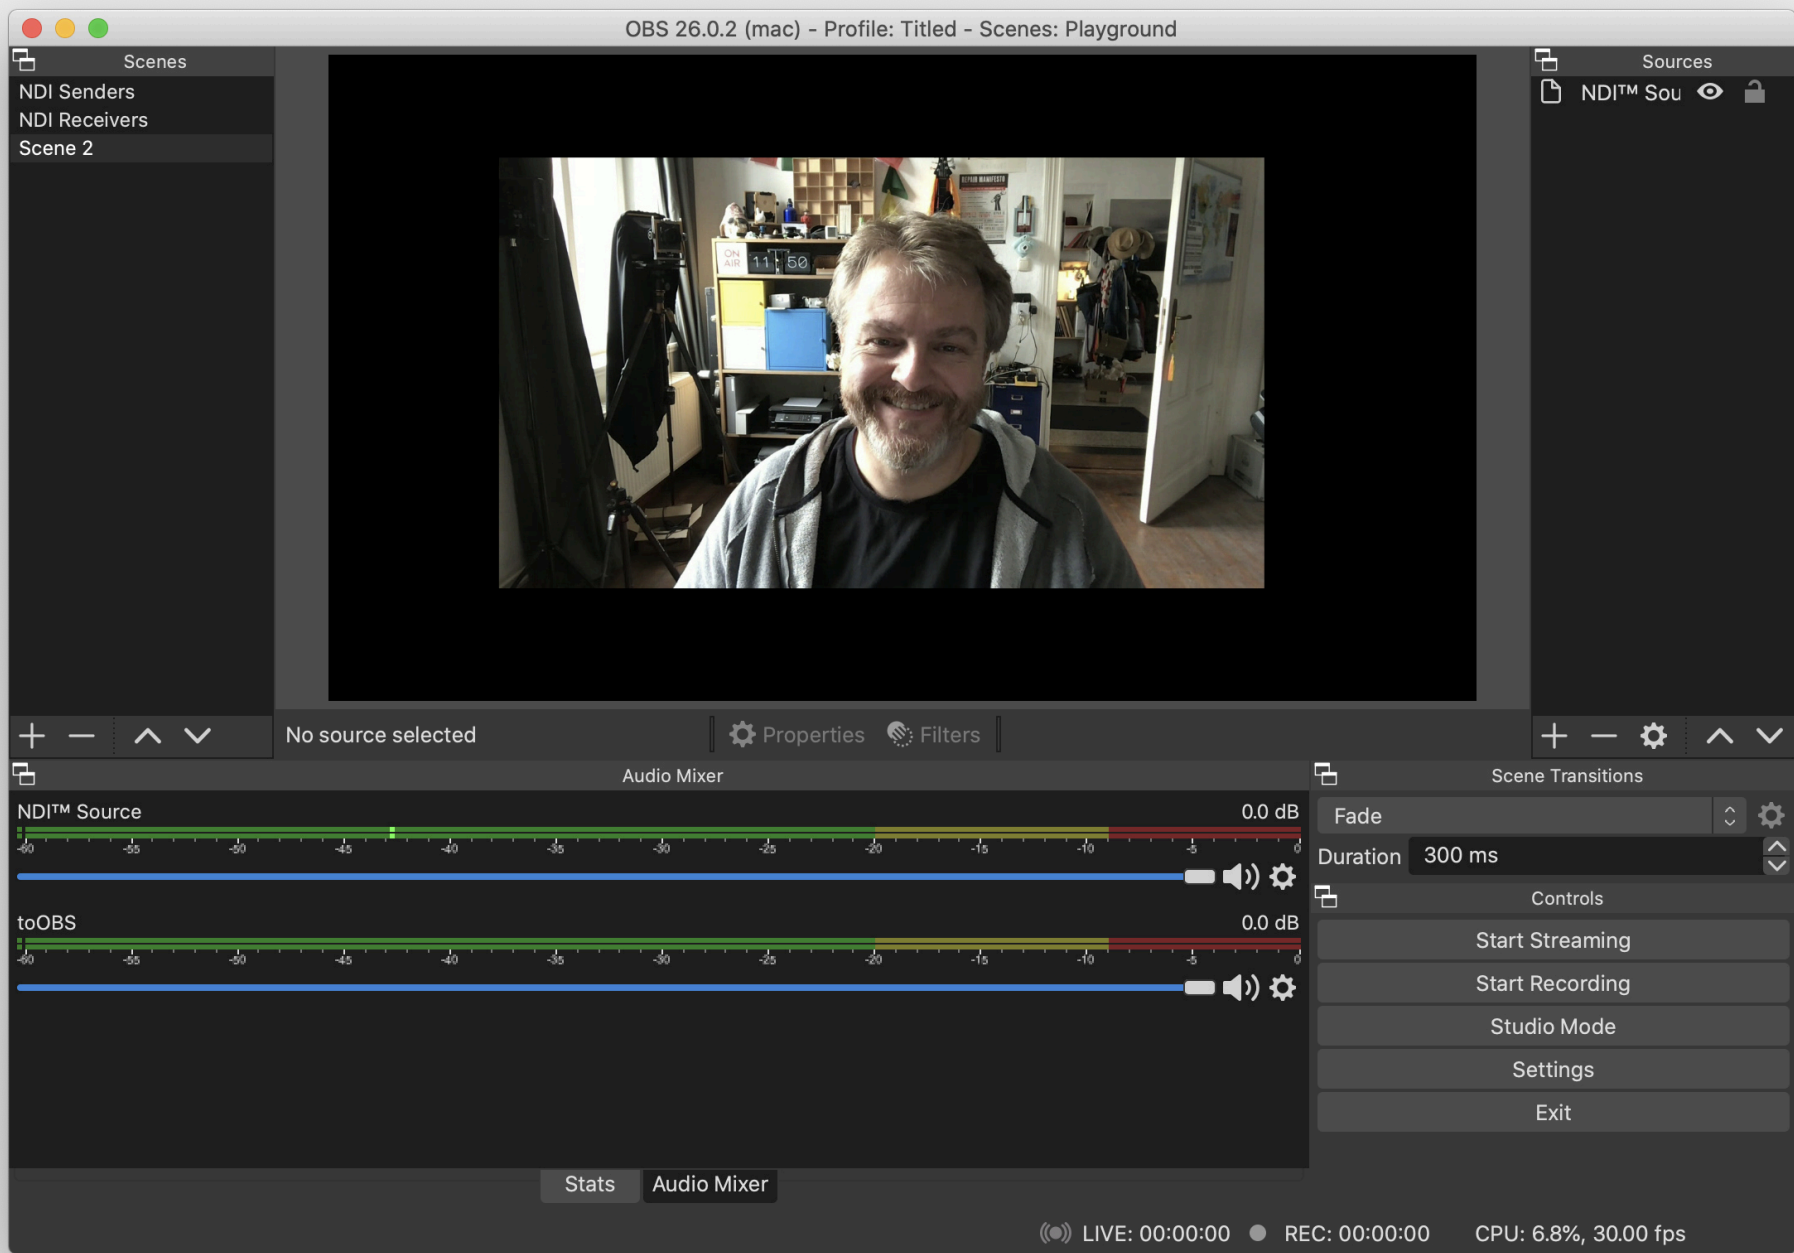

Then in NDIScanConverter select the same device as Audio In

NDIScanConverter (free on Mac AppStore) converts OBSN to NDI

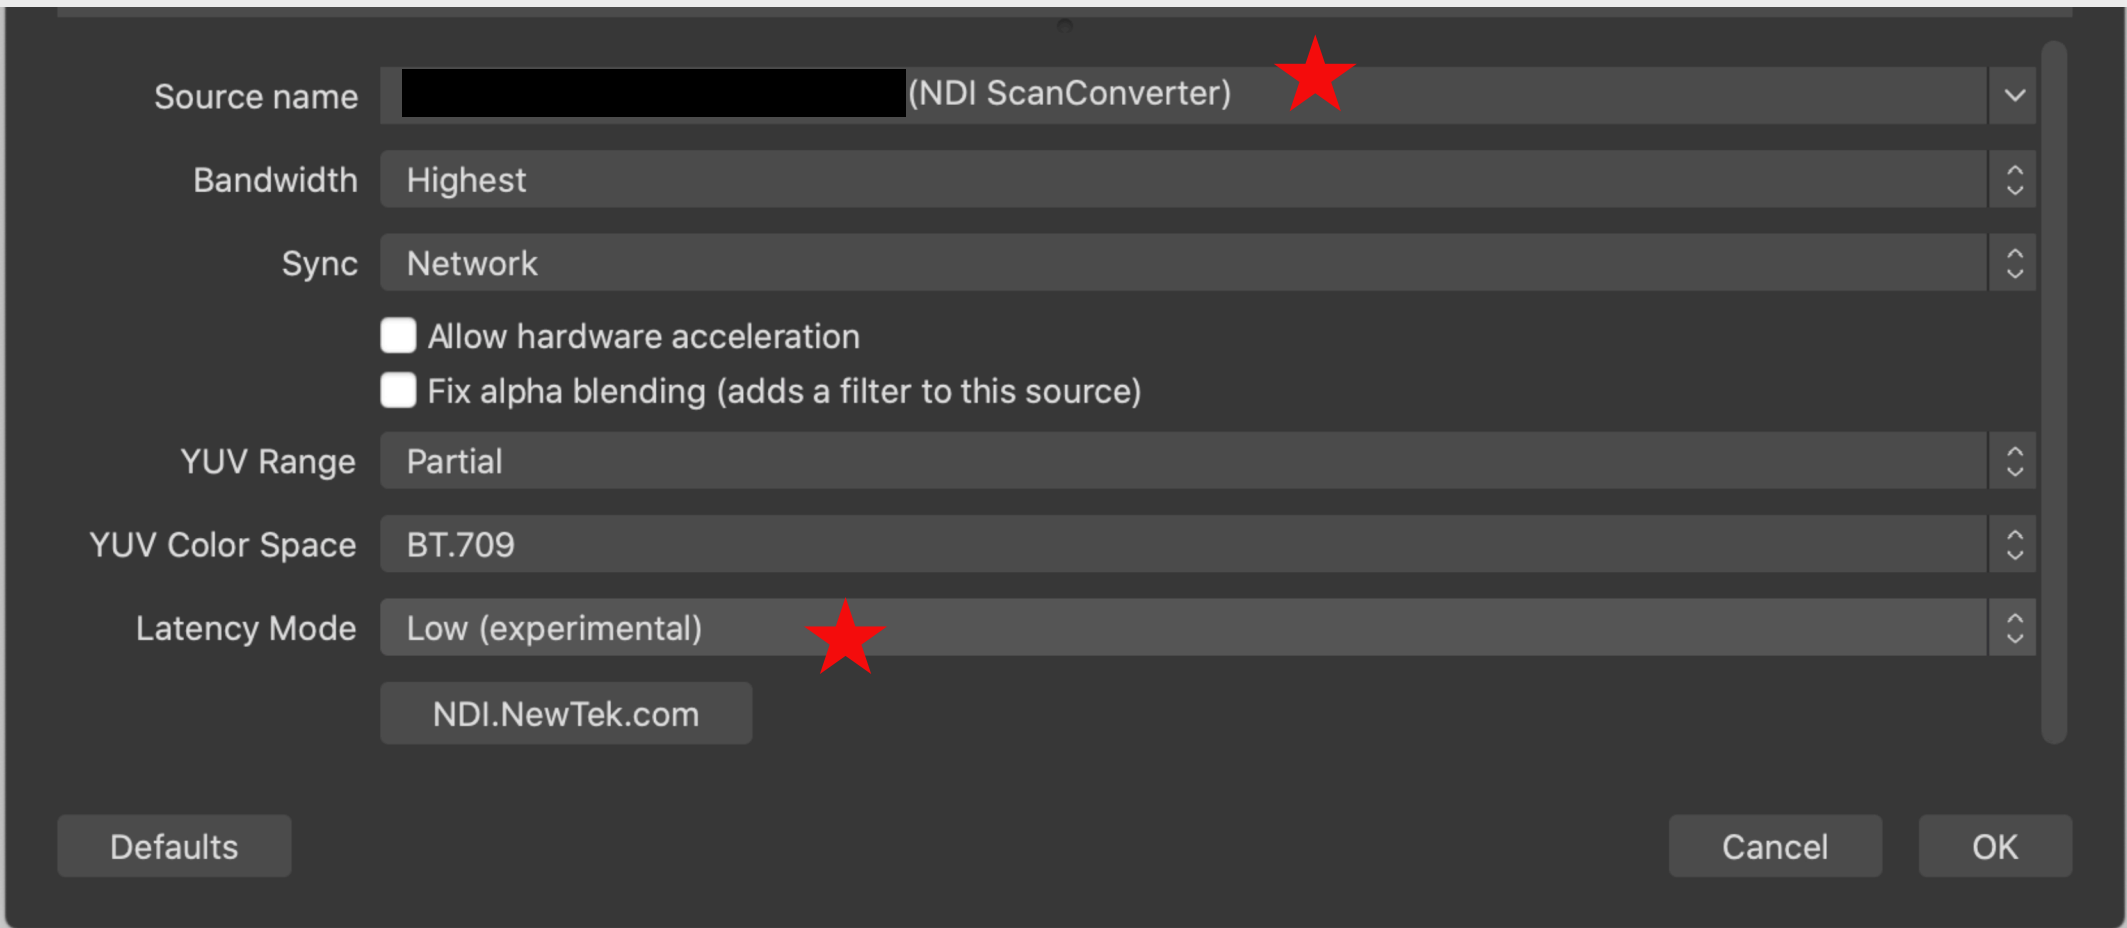

4 NDI

To add NDI inputs to OBS, get the plugin from <https://github.com/Palakis/obs-ndi>. Then add NDIScanConverter as an NDI source to your OBS scene. Set latency mode to Low

Video and audio into OBS

5

Note: NDIScanConverter automatically hides itself when not in focus. To configure it, just CMD-TAB to it and it becomes visible again.
